

OPEN JEV: THE DECISION-MODEL LANDSCAPE

43 verified repository sources • 15 checkpoint records • Snapshot: 20 Sep 2026
These are overlapping models, runtimes and experiments—not 43 independent Jev replacements.

TRAINED DECISION MODELS

bespokelabsai/nimble †
jaredpalmer/kev
NandhaKishorM/laya
mizorewww/laya-mlx
Mapika/decider
wfzyx/von
kotoba-lang/typed-decisions †

MAC AND DEVICE SCORING RUNTIMES

ADJACENT CLASSIFIERS, ADAPTERS, EVALUATION

Knowledgator/GLiClass
logan-markewich/jeff
typesafe-ai/system-one-adapter-python
fstandhartinger/jevbench

† Code-license scope unresolved in inspected metadata. Base-model and checkpoint licenses must also be checked.
Sources linked in the companion catalog. Grouping reflects implementation approach, not an accuracy ranking.

RECOMMENDED TEST ORDER

Laya-MLX → small Qwen scorer → Kev / Decider → larger Nimble comparison
Routine decisions: validated local model. Important advisory checks: hosted Jev. Codex reviews consequences.
